

## DOSIMETRY QUICK REFERENCE GUIDE

x Dosimetry is required for all individuals working with gamma and high energy beta emitting isotopes (P32, 1125, 1131, Na22, Te99m, Cr51, etc.) except as noted below.

frequent areas whole body do source.

	Allow a
minimum of two weeks time froprocurement of dosimetry. Dosimetry is	a service
provided by the Environmental Safety Division.	

x Dosimetry may be discontinued for individual workers on a case by case basis if historical data indicates that exposures are consistently minimal. Thisndietætion will be made by the radiation safety staff. In most cases a representative individual in the laboratory who performs the majority of the radiological work will continue to have their exposure monitored with dosimetry.
